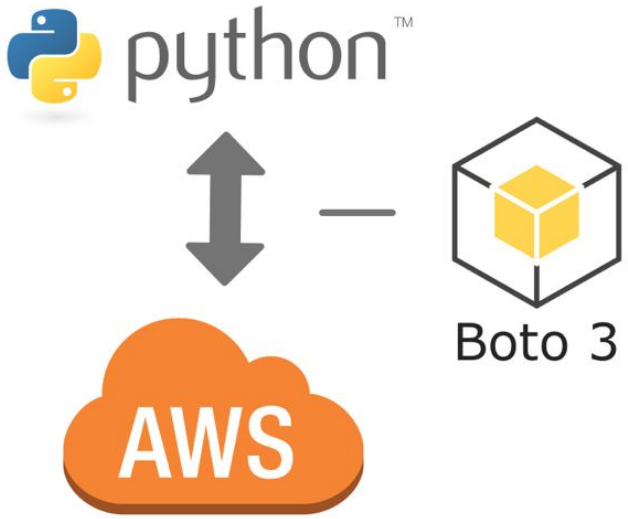
BOTO3

BOTO3



- Boto3 is the AWS SDK (Software Development Kit) for Python. It enables you to create, use, update, and delete AWS resources with your Python scripts. It is basically a Python library.

BOTO3

- Boto3 is maintained and published by Amazon Web Services. Boto (pronounced boh-toh) was named after the fresh water dolphin native to the Amazon river.
- Both, AWS CLI and boto3 are built on top of botocore — a low-level Python library that takes care of everything needed to send an API request to AWS and receive a response back.
- Boto3 can be installed using python package installer (pip)
- As it manages AWS resources, it requires to set credentials like AWS CLI.
